

#### BMP 017 - Provide Roof to Cover Source Area

Description of Potential Pollutant and Source: Spills, leaks and outdoor storage of materials can result in the exposure of significant materials to storm water.

Description of BMP: Contact of storm water with significant materials will be minimized by constructing a roof over the source area. Roofs are effective covering for fuel transfer areas, material loading/unloading areas, equipment maintenance, metal fabrication, hazardous waste storage, and materials storage areas.

Application Guidance: Install as needed.

Training: N/A

Effectiveness and Cost: Roofs are an effective, variable-cost BMP. Cost can be high for large areas.

Limitation: The height of the equipment or the size of the area may make this BMP infeasible.
